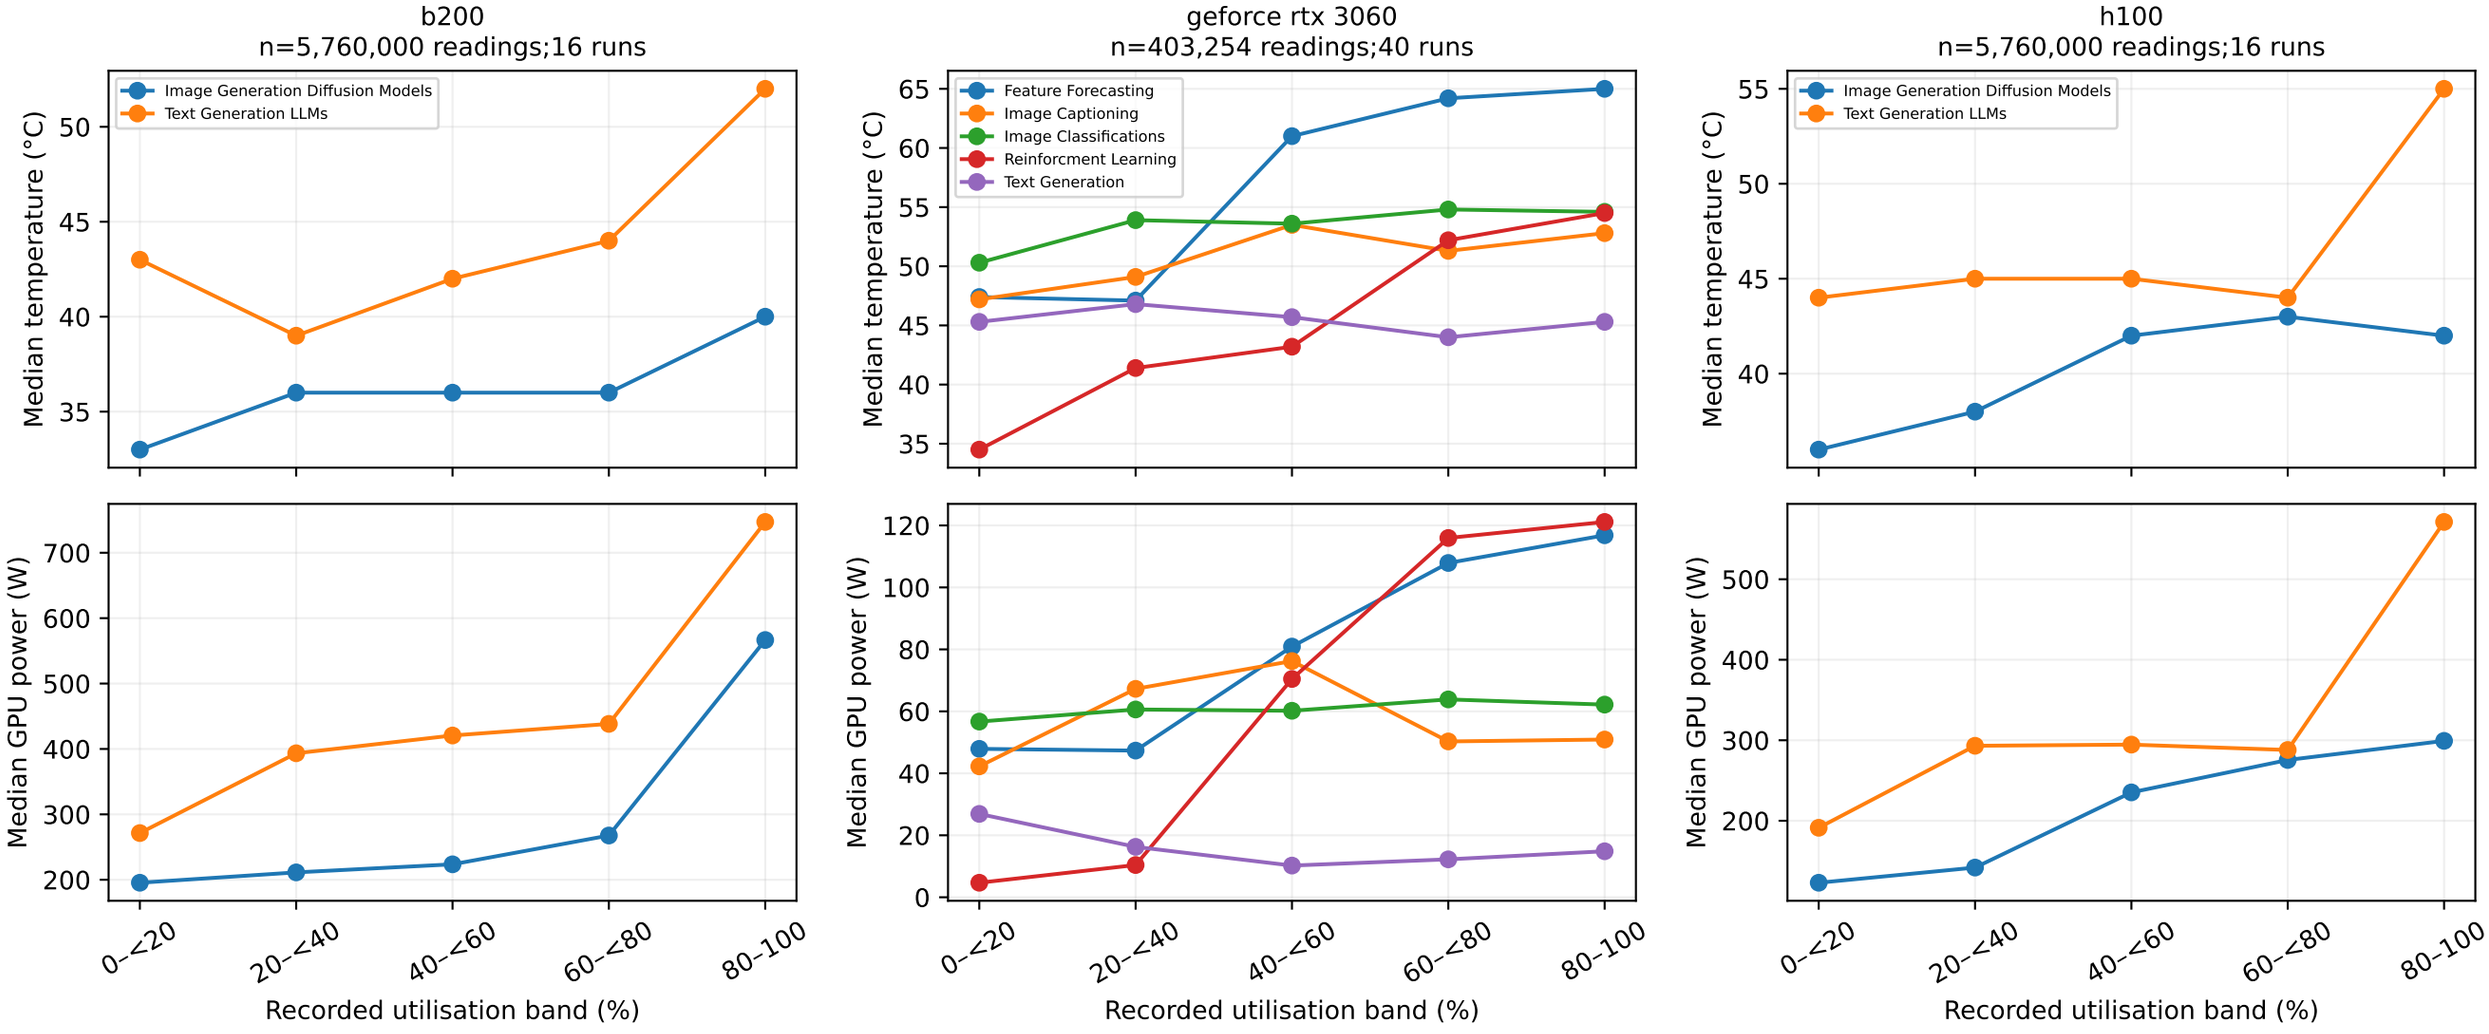
Measured temperature and power under different recorded GPU loads



Source: Figshare31654879;all11,923,254 GPU readings,72 unique runs. Lines connect descriptive workload-specific load bins.
Sampling rates and sensor cadence differ; observations are not independent experiments. These are measured associations, not effects of changing a scheduler.
P50/P90/P95/P99, valid metric counts and session counts are retained in thermal_load_profiles.parquet; no job-level join is asserted.
